

# Seaweed Centre

---

Located in the core of Sooke, British Columbia on Canada's west coast, Seaflora leads the way in the health and wellness industry again with the construction of the first Seaweed Centre in the Western Hemisphere.

We host skincare training seminars, seaweed science lectures, special events, and media galas.

At the heart of the design of our new building is our commitment to sustainability, utilizing green building technology and taking advantage of solar exposure.

## Wild Seaweed Tours

Seaflora offers spa enthusiasts an opportunity to experience the benefits of Seaflora's seaweeds from the outside in, with a one-of-a-kind Wild Seaweed and Thalassotherapy Tour.

Seaflora is one of the few skincare companies in the world to offer its clients the opportunity to learn, explore and gain a deeper understanding behind the fundamentals of Seaflora and what makes our skincare the richest seaweed skincare brand in the world.

## Harvesting Seaweed

Our pristine coastline is an exotic undulating oceanic garden of seaweeds against the backdrop of the Pacific Northwest rainforest.

Each seaweed variety is individually hand-harvested in a precise manner, to ensure that the remaining base of the seaweed continues to grow. This enables the seaweed gardens to flourish for many seasons to come.

**Spring months:** the tidal zone begins to blossom and glow with fresh new seaweeds appearing on the rocky coastline.

**Summer months:** a lush seaweed bed blankets the intertidal zone, filled with vibrant reds, purples, and greens.

**Fall:** the ocean garden is fading, while winter storms clear the garden for the next season

Through the summer, our local harvesters are in the intertidal zones, hand-selecting only the best seaweeds.

We sustainably gather the healthiest and freshest seaweed for the richest skincare products.
