

NATURAL HONEY

OF ALL TIMES

The healing virtues of honey have been recognized for at least 4,000 years. Its antiseptic qualities were known to the Egyptians. As a matter of fact, this knowledge lasted up to World War II, up until the birth of antibiotics. This warm wax reflects the colour of honey, is fluid and easy to apply. We recommend it for all types of skin and hairs. It can be heated in the microwave oven.

BOLÉRO, A UNIQUE CONTAINER

Arising out of a patented alloy of ceramic, plastic and fibreglass, our Boléro is the unique wax container fitted for microwave ovens AND wax-heaters throughout the whole world. It is a great time-saver in wax preparations. Boléro can be handled easily and its plastic sealing cap ensures the cleanliness of work areas and of all sides of this special container.

épillyss

ADVANCED
DEPILATORY
SOLUTIONS

Wax preparation

1. Remove the hygienic safety seal and fix the collar properly. Same will become handy to receive your spatula during the application of the wax. It will also keep the container clean without any wax overflowing.
2. It can be heated in the microwave oven: remove the cover and heat while stirring regularly and lightly until desired consistency, based on your own oven – approximately 2 minutes.
3. Solo-Pil or Duo-Pil wax-heaters can also be used at maximum heat (10-15 minutes) until liquid consistency. See Softening Temperature on the container.
4. Set the thermostat lower to maintain the texture liquid – but not too hot for the skin.
5. It is suggested to cover the bolero and reduce the temperature to its minimum while not in use for a long period of time so as to slow down the evaporation of essential oils.

Directions for use

1. Sanitize the area to be treated with the **épillyss** Pre-Depilatory Lotion.
2. Use a spatula to apply a thin and uniform layer of warm wax in the direction of hair growth.
3. Cover this layer of wax with a strip and smooth lightly for better adherence.
4. Use your free hand to withhold the stretched skin and seek your customer's help to hold the taut skin if necessary.
5. Hold one tip of the strip and pull in a very rapid motion in the opposite direction of the hair growth, as close to the skin as possible to avoid bruises.
6. Upon completion of hair-removing, apply aloe post-epilation gel to reduce redness. Smooth softly with an **épillyss** soothing and moisturizing post-depilatory product of your choice.
7. Clean your working area (instruments, table and others) with Zestasol, a 100% natural product.

Warning

Avoid exposure to the sun or sun bed before and/or after any epilation session. The skin sensitivity has been enhanced by the UV-rays and is more subject to burns. If your customer is preparing for a special event, attend at the hair removal the day before. Never practice wax epilation on broken, burnt or irritated skin, on warts, moles, eyelashes, or nipples. Waxing should not be done on people with diabetes or under medication without prior consultation with their doctors. It is possible to see red spots on the skin or feel ticklings following an epilation session. They will disappear after a few hours. The use of the **épillyss aloe gel** will reduce those reactions. For the first epilation, it is suggested to test a small skin area for allergies and to wait ten minutes before pursuing further.

Softening temperature

Celsius: 37° C - **Fahrenheit:** 99° F

Texture: Liquid

Ingredients : Colophonium (Purified pine resin), Cera Alba (Natural beeswax), Paraffinum Liquidum (Liquid paraffin)

Special touch: Honey extract

Essentials oils: Melissa Officinalis (Citronnella)

Suggested application *

Types of skin	Types of hair	Areas
All/sensitive	All	All

** This application is for information purposes as the data and/or comments do apply according to the place, technique and temperature of the wax during the treatment. Our suggestions are based on comments received from our customers and itemized along the years.*

All our waxes are made for all skin areas and all types of hairs.

Suggestions

Daily use of **épillyss Vitamin E** biological cream and of the Renaissance glove will considerably reduce the dryness of the skin and the arrival of ingrown hairs. For ingrown hair areas, it is highly recommended to use the Renaissance glove while bathing or under the shower, one hour before receiving the treatment. Maximize the result of your treatment by using the **épillyss post-epilation gel or serum** by electro-deposition (galvanic machine) after in-cabin treatments and by recommending it for use at home subsequently. In addition, the **épillyss PFB Vanish** is excellent to reduce ingrown hairs.

AZULEN

A SOFT TOUCH! Azulen is a powerful anti-inflammatory agent drawn from the flowery German camomile, also called 'Matricaire'. Its dark blue colour and stronger scent are a complement to its healing and antiphlogistic properties. Numerous experiments clearly proved its undeniable efficiency for various skin inflammations such as eczema and urticaria in particular. The lukewarm Azulen wax is of a greenish apple colour, its consistency is liquid and its application is light. We recommend it for all types of skin and hairs. It can be heated in the microwave oven.

BOLÉRO, A UNIQUE CONTAINER

Arising out of a patented alloy of ceramic, plastic and fibreglass, our Boléro is the unique wax container fitted for microwave ovens AND wax-heaters throughout the whole world. SENSITIVE SKIN

DELICATE NATURE This wax offers a very special touch yielded in particular by the addition of sea collagen which contains moisture, softness and re-mineralization properties due to its mineral density. Its high natural level of vitamins, proteins, mineral salts and oligo elements makes it a stimulating and tightening component. The milky texture of this wax will glide along your skin. Its butterscotch colour will enchant you. We recommend it for all types of skin and hairs with a special wink to sensitive skin. It can be heated in the microwave oven.

WHITE QUEEN

ROYALTY! Our greatest selling product ever! This white and milky easy-to-apply wax offers a special touch of the zinc oxide renowned for its purifying and antiseptic properties often used in the treatment of skin with signs of acne or eczema. This raw material is also used as an anti-UV protection agent. This white and creamy wax suits all kinds of skin and all types of hairs – beauticians use it frequently on sensitive skin. It can be heated in the microwave oven.

SENSOR

ULTIMATE! The presence of oligo elements amplifies the adherence on the hairs and reduces the traction on the skin. The incidence of extracts of lavender, lemon and minerals gives it its silky texture and aqua-pearl colour. Sensor enjoys an ultra fluid texture. Its application is very thin, therefore much more profitable. Its exceptional formula and the easiness of its application are the basis of its intense appreciation for the removal of integral bikini. It will soon be available for use in the microwave oven.

ADVANCED

SOLUTIONS

BIORESIN

The Bioresin C3 is the successful result of a unique patented process created by ESF's biochemists to decrease the level of oil in the wax, through a triple distillation procedure. Its great fluidity is one of the many exceptional qualities of this product. Its handling at ultra-low temperature is therefore less gummy, less painful and yields higher efficiency.

Wax preparation

1. Remove the hygienic safety seal and fix the collar properly. Same will become handy to receive your spatula during the application of the wax. It will also keep the container clean without any wax overflowing.
2. It can be heated in the microwave oven: remove the cover and heat while stirring regularly and lightly until desired consistency, based on your own oven – approximately 2 minutes.
3. Solo-Pil or Duo-Pil wax-heaters can also be used at maximum heat (10-15 minutes) until liquid consistency. See Softening Temperature on the container.
4. Set the thermostat lower to maintain the texture liquid – but not too hot for the skin.
5. It is suggested to cover the bolero and reduce the temperature to its minimum while not in use for a long period of time so as to slow down the evaporation of essential oils.

MILLÉNIA

SUPERIOR TRACTION! Thanks to Bioresin C3, Millénia enjoys vasodilator properties which reduce the feeling of pain, redness and soreness. The rich purple colour is a reminder of the lavender essential oil inserted in the making-up of this creamy and exceptional textured wax. Its application is very simple, cooling, and very prompt. It is highly adequate for strong hairs and sensitive zones such as the bikini area and the underarms. It can be heated in the microwave oven.

BIORESIN

The Bioresin C3 is the successful result of a unique patented process created by ESF's biochemists to decrease the level of oil in the wax, through a triple distillation procedure. Its great fluidity is one of the many exceptional qualities of this product. Its handling at ultra-low temperature is therefore less gummy, less painful and yields higher efficiency.

NOVATHERM

VASODILATOR! This depilatory gel is unique! It was created by our own biochemists following a patented discovery, the Bioresin C3 which grants it a vasodilator and protection effect which results in maximum adherence to hairs and lesser traction on the skin! This gel enjoys an exceptional texture and a shiny red colour as a result of the trace-elements that it shelters. The skin will not become sticky and will be less irritated after the hair removal. This product is suitable for all types of skin or hairs and is very popular with young people, and for integral hair removal. It will soon be available for use in the microwave oven.

BIORESIN

The Bioresin C3 is the successful result of a unique patented process created by ESF's biochemists to decrease the level of oil in the wax, through a triple distillation procedure. Its great fluidity is one of the many exceptional qualities of this product. Its handling at ultra-low temperature is therefore less gummy, less painful and yields higher efficiency.

ADVANCED

CHOCOLATE

ULTRA SOFTNESS! This depilatory gel contains Bioresin C3 which holds vasodilatory properties that will help reduce the feeling of pain, redness and soreness. The cocoa is well known for its antioxidizing effect due to the integrated presence of vitamin E. Moreover, it participates in the restructuring of the skin and prevents skin dehydration in supplying liveness, softness and tonicity. Its chocolate fragrance is soothing and comforting. This creamy milk-chocolate colour gel enhances the softness of your skin and covers a much more extensive area than the majority of gels. It is also in great demand for sensitive skin. It will soon be available for use in the microwave oven.

BIORESIN

The Bioresin C3 is the successful result of a unique patented process created by ESF's biochemists to decrease the level of oil in the wax, through a triple distillation procedure. Its great fluidity is one of the many exceptional qualities of this product. Its handling at ultra-low temperature is therefore less gummy, less painful and yields higher efficiency.

2. It can be heated in a Solo-Pil or Duo-Pil wax-heaters at maximum heat (10-15 minutes) until liquid consistency. See Softening Temperature on the container.
3. Set the thermostat lower to maintain the texture liquid – but not too hot for the skin.
4. It is suggested to cover the bolero and reduce the temperature to its minimum while not in use for a long period of time so as to slow down the evaporation of essential oils.

Directions for use

1. Sanitize the area to be treated with the **épillyss** Pre-Depilatory Lotion.
2. Use a spatula to apply a thin and uniform layer of warm wax in the direction of hair growth.
3. Cover this layer of wax with a strip and smooth lightly for better adherence.
4. Use your free hand to withhold the stretched skin and seek your customer's help to hold the taut skin if necessary.
5. Hold one tip of the strip and pull in a very rapid motion in the opposite direction of the hair growth, as close to the skin as possible to avoid bruises.
6. Upon completion of hair-removing, apply aloe post-epilation gel to reduce redness. Smooth softly with an **épillyss** soothing and moisturizing post-depilatory product of your choice.
7. Clean your working area (instruments, table and others) with Zestazol, a 100% natural product.

Warning

Avoid exposure to the sun or sun bed before and/or after any epilation session. The skin sensitivity has been enhanced by the UV-rays and is more subject to burns. If your customer is preparing for a special event, attend at the hair removal the day before. Never practice wax epilation on broken, burnt or irritated skin, on warts, moles, eyelashes, or nipples. Waxing should not be done on people with diabetes or under medication without prior consultation with their doctors. It is possible to see red spots on the skin or feel ticklings following an epilation session. They will disappear after a few hours. The use of the **épillyss aloe gel** will reduce those reactions. For the first epilation, it is suggested to test a small skin area for allergies and to wait ten minutes before pursuing further.

Softening temperature

Celsius: 32° C - **Fahrenheit:** 90° F

Texture: Creamy gel

Ingredients: Colophonium (Purified pine resin), Cocoa Oil (Natural cacao oil), Propyleneglycol

Special touch: C3 Bioresin, Zinc oxide, Natural Cacao Butter

Suggested application *

Type of skin	Types of hair	Areas
Very sensitive Hypoallergenic	Thin Average	Face Sensitives areas

** This application is for information purposes as the data and/or comments do apply according to the place, technique and temperature of the wax during the treatment. Our suggestions are based on comments received from our customers and itemized along the years.*

All our waxes are made for all skin areas and all types of hairs.

Suggestions

Daily use of **épillyss Vitamin E** biological cream and of the Renaissance glove will considerably reduce the dryness of the skin and the arrival of ingrown hairs. For ingrown hair areas, it is highly recommended to use the Renaissance glove while bathing or under the shower, one hour before receiving the treatment. Maximize the result of your treatment by using the **épillyss post-epilation gel or serum** by electro-deposition (galvanic machine) after in-cabin treatments and by recommending it for use at home subsequently. In addition, the **épillyss PFB Vanish** is excellent to reduce ingrown hairs.
